

135.7-137.8 KHz allocation. Agree with the ARRL proposal except for power level should be limited to 250 watts PEP and bandwidth sufficient to allow SSB voice communications experimentation.

5250-5400 KHz allocation. Should be authorized for all operators with General class and higher license. Power should be limited to 1000 watts PEP. The only mode demarcation should be to limit the range from 5250-5300 KHz to narrow band (CW,RTTY,Data) and the range between 5300 and 5400 KHz for wideband (Voice) operation.
